

Automated Micropipetting System – Imperial College London, DAPP Group F (2025)

Redrawn from the report's KiCad figure (Appendix F). Connectivity uses net labels.

Pin assignments follow the firmware. The report figure differs: it shows one axis only, DIR/STEP on D6/D7 (swapped), the buzzer on D52 and the Nextion on TX0/RX0. The firmware uses buzzer D2 and Serial1 (TX1 = D18, RX1 = D19). R1/R2 values were not given in the report. VMOT_GND and LAC_V- are separate returns as drawn; tie to GND if supplies share a ground.

Redrawn from final report Appendix F
